Your Pets, Our Care

Tips

BEFORE GRINDING

Let him sniff the nail grinder while it is turned off, turn the grinder on so he can get used to the sound it makes, have him sit while the tool is in your hand and running. Once the pet is used to the tool, try touching it to his nails.

PET SAFETY

The pet should be secured during grinding process. It might be helpful to have another person help to restrain the pet if necessary. Keep hair away from the grinding wheel. If hair gets entangled in the grinding wheel, the nail grinder will be forced to stop rotating, please switch off the nail grinder immediately, remove the entangled hair, and then switch it on to continue working. In addition, if too much pressure is applied to the nail grinder, the nail grinder will stop rotating. At this time, please loosen it slightly and the nail grinder will continue to operate.

GRINDING NAILS

Use the NORMAL setting for most nail grinding needs.

Use the SOFT setting for small pets.

1. Separate the pet's toes by placing your thumb between the pads and hold foot securely. Push long hair away from the foot to avoid tangling or pulling. You can try placing a nylon stocking over the foot and pushing nails through the nylon to allow easy access to nails while keeping hair out of the way.
2. Support the toe and nail in one hand while using the nail grinder in the other hand. This keeps vibrations to a minimum and is more comfortable for the pet.
3. Turn on the nail grinder first, then slowly approach the pet's nail, and grinding nails with moderate force.
4. To get a smooth edge, grind from the bottom of the nail up towards the tip.
5. Use a continuous side-to-side motion when grinding each nail.
6. IMPORTANT: Do not apply excessive force when grinding. Let the speed of the grinder do the work. Do not apply pressure to the nail with the spinning grinding wheel. Pressure causes the nail to get hot and will cause pain to the pet.
