THE ATHLETE'S EDGE

VU-COT02 This new cold and hot therapy system integrates cold, heat and compression therapies in one easy-to-use unit, its refrigeration is achieved by adding ice cubes or cold water, Heating is achieved by adding hot water. Optional wrapping accessories for different body parts. For patients with long-term exercise, labor, various trauma, bone injury, fever, pain and swelling etc. it can continuously improve the blood of the human body circulation and vasodilation. It has the advantages of safety, simplicity, and high efficiency.

Cold and hot compression therapy are two common techniques used to reduce pain, swelling, and inflammation in different parts of the body. Cold therapy, also known as cryotherapy, involves the use of cold temperatures to reduce blood flow to the affected area, thereby decreasing inflammation and swelling. On the other hand, hot therapy, also known as thermotherapy, involves the use of heat to increase blood flow to the affected area, thereby promoting healing and relaxation.
